

Table of Contents

1	Introduction	7
2	Signals	8
2.1	Signals displayed in time domain	8
2.2	Relationship between time and frequency domain	9
3	Configuration and Control Elements of a Spectrum Analyzer	17
3.1	Fourier analyzer (FFT analyzer)	17
3.2	Analyzers operating in accordance with the heterodyne principle	27
3.3	Main setting parameters	30
4	Practical Realization of an Analyzer Operating on the Heterodyne Principle	32
4.1	RF input section (frontend)	32
4.2	IF signal processing	44
4.3	Determination of video voltage and video filters	55
4.4	Detectors	61
4.5	Trace processing	73
4.6	Parameter dependencies	76
4.6.1	Sweep time, span, resolution and video bandwidths	76
4.6.2	Reference level and RF attenuation	80
4.6.3	Overdriving	86

5	Performance Features of Spectrum Analyzers	95
5.1	Inherent noise	95
5.2	Nonlinearities	102
5.3	Phase noise (spectral purity)	114
5.4	1 dB compression point and maximum input level	120
5.5	Dynamic range	125
5.6	Immunity to interference	135
5.7	LO feedthrough	138
5.8	Filter characteristics	139
5.9	Frequency accuracy	140
5.10	Level measurement accuracy	141
5.10.1	Uncertainty components	142
5.10.2	Calculation of total measurement uncertainty	148
5.10.3	Measurement error due to low signal-to-noise ratio	156
5.11	Sweep time and update rate	159
6	Frequent Measurements and Enhanced Functionality	162
6.1	Phase noise measurements	162
6.1.1	Measurement procedure	162
6.1.2	Selection of resolution bandwidth	165
6.1.3	Dynamic range	167
6.2	Measurements on pulsed signals	172
6.2.1	Fundamentals	173
6.2.2	Line and envelope spectrum	177
6.2.3	Resolution filters for pulse measurements	182
6.2.4	Analyzer parameters	184
6.2.5	Pulse weighting in spurious signal measurements	185

6.2.5.1 Detectors, time constants	186
6.2.5.2 Measurement bandwidths	190
6.3 Channel and adjacent-channel power measurement	190
6.3.1 Introduction	190
6.3.2 Key parameters for adjacent-channel power measurement	193
6.3.3 Dynamic range in adjacent-channel power measurements	194
6.3.4 Methods for adjacent-channel power measurement using a spectrum analyzer	195
6.3.4.1 Integrated bandwidth method	195
6.3.4.2 Spectral power weighting with modulation filter (IS-136, TETRA, WCDMA)	198
6.3.4.3 Channel power measurement in time domain	200
6.3.4.4 Spectral measurements on TDMA systems	201
References	204
The current spectrum analyzer models from Rohde & Schwarz	207
Block diagram of spectrum analyzer described in this book	220

Measurement Tips

Measurements in 75 Ω system	33
Measurement on signals with DC component	37
Maximum sensitivity	101
Identification of intermodulation products	112
Improvement of input matching	147
